

La Higuera Copper-Iron Project & Caballo Blanco Copper-Iron Project

A Newly Consolidated I.O.G.C. Project Strategically Located in Chile

Azul Ventures is a mineral exploration company with the rights, through its wholly owned subsidiary Minera Azul Ventures Limitada, to acquire an interest in the **La Higuera Copper-Iron Project** and the **Caballo Blanco Copper-Iron Project** in Chile.

I.O.C.G. MINES ALONG CHILE'S COASTAL BELT

STRATEGIC LOCATION

The projects are located 600 km north of Santiago, Chile, immediately adjacent to the mining town of La Higuera which is 60 km north of La Serena, and within 4 km of the Pan American Highway. The mining concessions at La Higuera total 1,076 hectares and total 2,550 hectares at Caballo Blanco. Housing is available at the town of La Higuera and it is expected that water supplies can be developed within the area. The main northern Chile power grid passes nearby. Supplies can be obtained from La Serena and Santiago. La Serena, Copiapo and other nearby towns, including La Higuera, have well trained and experienced miners.

ASSET SUMMARY

The **La Higuera Copper-Iron Project** is the result of the first-time consolidation of mining rights in a historical copper mining center where high grade copper sulphide mining supported 11 small smelters and which is located in a prolific I.O.C.G. belt surrounded by excellent infrastructure in a mining friendly jurisdiction. Mining activity on the La Higuera Project dates back to at least the late 18th century; however, there had been no known modern exploration conducted on the property. Since the consolidation of the mining rights, Azul has completed a rock sampling program, geophysical work and 4,088 m of drilling.

The **Caballo Blanco Copper-Iron Project** begins approx. 1 km SW of the La Higuera project. There has been some previous exploration carried out and there are several small copper workings that warrant follow-up and represent an exploration target with significant merit. Azul plans to explore the Caballo Blanco project in parallel with La Higuera.

3,626 HECTARES OF CONCESSIONS

Exploration to date supports management's belief that the main zone of disseminated and stockwork copper-iron mineralization at La Higuera is continuous over a length in excess of one kilometre and down to depths of several hundred metres.

CURRENT EXPLORATION PROGRAM

Phase I Drilling (La Higuera) (Completed May 2012)

- 2,006 m of diamond drilling / 2,082 m of RC
- Highlights: 24.0 m of 0.47% Cu and 36.26% Fe
9.0 m of 0.97% Cu and 12.07% Fe
4.1 m of 1.46% Cu and 13.86% Fe

Underground Channel Sampling (222 samples)

- Highlights: 23 m of 1.20% Cu and 32.7% Fe
23 m of 0.68% Cu and 35.9% Fe

Phase II Exploration

La Higuera

- Approval for an additional 14,000 m of drilling
- Underground channel sampling and cross cut development
- Commence underground diamond drilling
- Target of 20 mT of high-grade copper sulphides and magnetite ore

Caballo Blanco

- Surface geological mapping and sampling
- Plan and commence diamond drilling program
- Target of >100 mT of open-pittable Cu-Fe

PREVIOUS EXPLORATION

La Higuera Copper-Iron Project

- Ground magnetic and I.P. surveying
- A strong magnetic anomaly with coincident chargeability and resistivity anomalies was outlined in the central part of the grid near historical and current mining operations. The magnetic anomaly has very strong amplitudes and high modeled magnetic susceptibilities that are indicative of possibly economic magnetite grades. The Central target is considered a high-priority exploration target for combined magnetite-copper mineralization.

Caballo Blanco Copper-Iron Project

- Ground magnetic and I.P. surveying
- Drilling including 10 RC and 5 diamond drill holes
- The ground magnetic survey generated a large, moderate amplitude magnetic anomaly and several of the exploration drill holes were located within this.

COMPANY HISTORY

April 2012 – Changes name to Azul Ventures Inc.

January 2012 – Himalayan Capital Corp. closes Qualifying Transaction with Minera Azul Ventures Limitada.

October 2011 – Azul completes a \$1,500,000 debenture financing which was converted into 6,000,000 common shares on the completion of the Qualifying Transaction, at a deemed price of \$0.25/sh.

June/July 2011 – Azul signs La Higuera option agreements with six separate mineral rights holders.

CAPITAL STRUCTURE (as of Aug. 31, 2013)

Issued & Outstanding:			30,449,362
Options:	Expiry	Price	
	Jan 12, 2017	\$0.30	1,575,000
	Jan 30, 2017	\$0.30	25,000
	Feb 20, 2017	\$0.305	100,000
Warrants:	Expiry	Price	
	Aug 9, 2015	\$0.15	8,750,000
	Jan 12, 2017	\$0.30	300,000
Fully Diluted Common Shares:			41,199,362

MANAGEMENT & BOARD OF DIRECTORS

David O'Connor, President & CEO: Geologist with 30+ years' experience.

Brad Boland, CFO: 15+ years' in the mining industry.

Michael Schuler, Vice President, Exploration: Geologist with 35+ years' experience.

Francisco Schubert, Country Manager: Mechanical engineer with 30+ years' of industry experience.

Tony Wonnacott, Chairman: 15+ years' experience in corporate securities law.

Mike Hoffman, Director: Mining engineer with 25+ years' of industry experience.

Catherine Gignac, Director: Mining equity research analyst with 25+ years' experience.
